PROVIDED BY**

Overhead Cameras

Poseidon uses cameras engineered for the demanding environment of the swimming pool. Mounted under the water in the walls of the pool for deep water, or overhead to monitor shallower areas, Poseidon's cameras provide a complete and overlapping view of the swimming pool.

Supervision Workstation

The workstation provides a way to control and visualize the operation of the system. A simple user interface allows operators to view images from the cameras and see alerts when they happen.

Alert 12x36

LED Display Panel

The LED display panel displays in real time the location of the swimmer in trouble and the elapsed time since detection. It is also equipped with an audible alarm. The panel is visible from 1,000 feet and is constructed of materials that resist corrosion and are water-resistant.

Central Processor

At the heart of Poseidon, the central processor unit manages and analyses the images from all of the cameras, tracking swimmers in the pool in real-time. When the system detects a swimmer in difficulty, it raises the alarm through the workstation and pagers.

Underwater Cameras

Poseidon uses cameras engineered for the demanding environment of the swimming pool. Mounted under the water in the walls of the pool for deep water, or overhead to monitor shallower areas, Poseidon's cameras provide a complete and overlapping view of the swimming pool.

A Swimmer in Difficulty

The Poseidon system warns the lifeguards as soon as it detects a possible drowning.

	Equipment/Installation Cost	Equipment/Installation Cost
	\$115,000	\$150,000
TERM	PAYMENT*	PAYMENT*
36 months	\$3,442*	\$4,489*
48 months	\$2,651*	\$3,457*
60 months	\$2,190*	\$2,856*
72 months:	\$1,888*	\$2,462*
84 months:	\$1,677*	\$2,187*

Advance Rental: First and last month **Purchase Option:** One Dollar
